Conference and Event Spaces

**University Avenue
The Public Realm**

A nighttime photograph of the ANU campus. In the foreground, there is a body of water reflecting the lights. A series of purple, wavy light art structures are strung across the middle ground, illuminated from below. In the background, several modern buildings are lit up, with a prominent curved building on the right. The sky is a mix of dark blue and purple, suggesting dusk or dawn.

Virtual Tour**

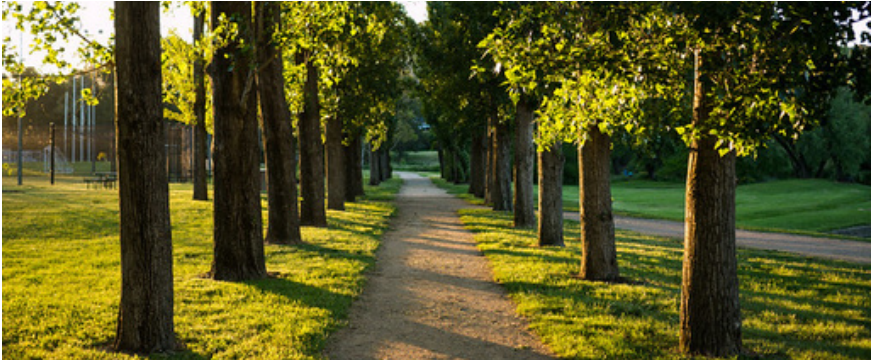

University Avenue

University Avenue is an expansive tree-lined pedestrian walkway that provides a clear connection between Kambri, the ANU and the Canberra CBD. It's a streetscape designed for pedestrians, with picturesque trees, street furniture and smart poles featuring lighting, power, CCTV and Wi-Fi. Events and activities such as markets and O-Week celebrations utilise its linear form and dedicated infrastructure on a regular basis, with the Avenue also playing a role for vehicle VIP entries into the ANU for special events.

This vibrant and bustling avenue in the public realm lends itself as an ideal location to host **markets, street festivals and community gatherings**.

Highlights

- Serves as a main route for students and faculty, linking major buildings and facilities
- is a vibrant hub for student activism, where passionate individuals come together to advocate for various causes
- Regular market days feature a variety of stalls run by students and local vendors, supporting local entrepreneurship

At Kambri, we value sustainability

Green design thinking

The entire precinct was designed and delivered using the One Planet methodology, a quantitative measure of human demand versus supply of nature. The precinct is operating at 0.6 of a planet per year. University Campuses are using approximately 1.3 planets per year.

Carbon reduction

Across the project, over 31,100 tonnes of CO² was avoided by specifying low carbon materials, and clever design and construction. 40% less embodied carbon was used for the base building, and 50% less for the fitouts.

Carbon smart event guide

ANU Green has updated its [Carbon Smart Event Guide](#), which outlines easy steps to run more sustainable events on and off campus. Events are an important part of the university experience, but they also produce a large amount of greenhouse gas (GHG) emissions. The good news is there are easy steps we can take to have a positive impact.

Many of the suggestions not only reduce our environmental impact but also have lower associated costs while emphasising community engagement.
